BGF AERIALITE S CLOTH WITH GREENROOM EPOXY

This resin/cloth combination has been developed to create maximum strength, minimum weight and minimum discoloration in surfboards. S cloth is used in different combinations (4 and 6oz.) to give each board its' desired flex..

FUTURES FINS AND BOXES

We offer Futures fins and boxes so each board can be custom adjusted for all riders and all weather conditions. Boards can be ordered with a twin-2 , thruster-3 or quad-4 fin setup.

XTRAK OR SEA-DEK TRACTION

Both types of traction offered to customers who want a kick pad (Xtrak) or a flat traction (Sea-dek) surface.

EPS FOAM - CNC CORES

Lakewakes has all cores made from virgin EPS foam and blanks are cured in a hotroom before they are CNC hotwire cut into shapes. All cores are stringerless to give that springboard feel and are 1 1/8" thick.

BOARDS VACUUM BAGGED

All Lakewakes boards are vacuum bagged on the lamination coat to get the proper epoxy to cloth ratio for a ultra strong, ultralight finished product. Vacuum bagging also gives the board crisp and tight laps.

CUSTOMER SHAPES

Customers can use their own cnc shapes or use our 2009 shapes. Lead time is 2 weeks for a finished board if cores are in stock and 4 weeks on custom shapes or nonstocked cores. Starting at 350. USD
